Applied Analytics Application Note No. AN-002

Application Summary

Analyte: hydroquinone monomethyl ether (MeHQ)

Detection Technology: OMA-300 Process Analyzer

Process Stream: acrylonitrile

Zero Fluid: air

Typical Measurement Range: 0-100 ppm

Introduction

Polymerization inhibitors are chemicals which stabilize reactive monomers and prevent spontaneous polymerization. If too little inhibitor is added to a reactive monomer, polymerization can occur in pipes or vessels and require mechanical removal. On the other hand, if too much inhibitor is added, the final product may have difficulty polymerizing at the intended stage.

Monitoring hydroquinone monomethyl ether (MeHQ) in Acrylonitrile

MeHQ is usually added as an inhibitor to acyrolinitrile (a precursor to polyacrylonitrile fibers for the textile industry). The concentration of MeHQ in the monomer needs to be regulated at approximately 100 ppm to avoid spontaneous polymerization (to polyacrylonitrile) as well as waste of MeHQ.

MeHQ has a distinct UV absorbance curve which allows the OMA system to easily monitor its real-time concentration. The full-spectrum analysis is critical for differentiating MeHQ absorbance from other absorbing impurities in the sample.

The OMA continuously outputs the MeHQ reading to the plant's main computer, providing new measurements at a 1 second interval for extremely tight process control.

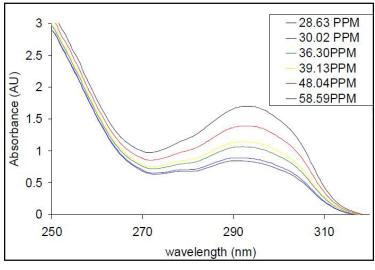

Zeroing the system on pure acrylonitrile is highly impractical due to storage difficulty. Since water mixing with acrylonitrile leads to coating and miscibility effects, water is also not a zeroing option. Air has proven to be an effective and practical zeroing fluid when used with a proper sampling system that minimizes bubble formation.

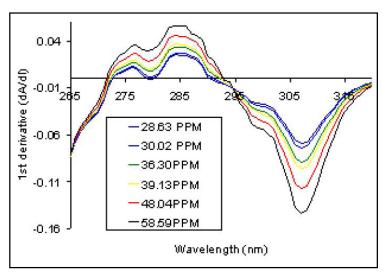

Applied Analytics Application Note No. AN-002

Absorbance Spectra of MeHQ in Acrylonitrile

These spectra were taken by the OMA-300 on calibration standard mixtures of MeHQ in Acrylonitrile:

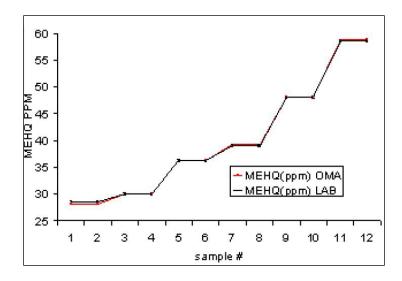

Absorbance Spectrum of MeHQ in Acrylontrile

1st Derivative of Absorbance Spectrum of MeHQ in Acrylontrile

The OMA readings on calibration standards correlate extremely well with lab readings:

Applied Analytics Application Note No. AN-002

The specifications below represent performance/build of the OMA-300 Process Analyzer in a typical MeHQ application.

For technical details about the OMA-300 Process Analyzer, see the data sheet:
